Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a method of reproducing information recorded on a record carrier, the information being a sequence of video frames coded in accordance with an MPEG format and including I, P, and B frames. The independent claim identifies the feature of "monitoring the frames in the information from the read head and comparing a number of frames per unit of time in the read information with a predetermined nominal average; supplying the I frames of the read information to the output and, to ensure that the average number of frames supplied to the output per time unit is substantially equal to the predetermined nominal average, supplying at least one P frame of the read information to the output". The closest prior art, Lane discloses a conventional reproducing apparatus which includes trick play reproduction, either singularly or in combination fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yonemitsu discloses a reproducing apparatus which includes trick playback mode.

Sakamoto et al discloses a fast playback apparatus.
